

# Multiplicity correction across the full declared analysis family

family size = 59; family-max from 5000 realisations; dotted line = 0.05

● BH-FDR    ● BY-FDR    ● Holm    ● BH-FDR    ■ BY-FDR    ⊠ Holm  
● Bonferroni    ● family-max    ● scan-global    ▲ Bonferroni    + family-max    ✱ scan-global

Holm/Bonferroni need no independence; BY is dependence-robust FDR; family-max coupling is approximate.
