

Multiplicity correction across the full declared analysis family

family size = 59; family-max from 5000 realisations; dotted line = 0.05

● BH-FDR ● BY-FDR ● Holm ● BH-FDR ■ BY-FDR ⊠ Holm
● Bonferroni ● family-max ● scan-global ▲ Bonferroni + family-max ✱ scan-global

Holm/Bonferroni need no independence; BY is dependence-robust FDR; family-max coupling is approximate.
